Doris Yeung 杨婷婷

AI Product & Agent Experience Designer · Tools, Mobile, iPad & AI SaaS

Shenzhen, China · +86 185 6676 0593 · yvetteyeung@163.com

PROFILE

Product designer with 14 years across tool products and multi-device experiences, covering web, mobile app, iPad / tablet and mini-programs for teams in China and overseas markets. My focus is on tools for teams and developers, and on AI products — Vika (multi-dimensional tables), bika.ai (automation), Buda (agent workspace and Drive), Sandock (developer sandbox) and Kingdee Yunzhijia (enterprise collaboration IM) — and I shipped the Buda and Busabase mobile and multi-device experiences, the Kingdee Yunzhijia mobile app across four major releases (V6–V9), and the HEYTEA GO app / mini-program with its in-store assistant tablets. For the past two years I have focused on AI-native agent products and their subscription flows, and I carry that work through to front-end delivery.

EXPERIENCE

Shenzhen Weige Zhishu Co., Ltd. — Vika, bika.ai, Kapps

Aug 2019 – Sep 2026

Design Lead / Product Designer

- Led interaction design for Vika, a multi-dimensional table platform, from MVP: field types, cross-table relations, permissions, views, dashboards and widgets.
- Started bika.ai as a new product line, validating spreadsheet-driven automation with prototypes, then shipping AI Agent templates to the official Template Center.
- Owned the Agent Workspace and Drive surfaces in Buda: multi-panel sessions and tabs, agent and space switching, file tree, preview and side panel behaviour.
- Shipped the Buda mobile app and tablet experience, plus the App Store screenshot set and multilingual marketing pages.
- Delivered Sandock's sandbox product (volumes, quotas, audit log, API key auth) and its subscription system, including renewal, cancellation and webhook edge cases.
- Rebuilt Sandock's onboarding, console, pricing page and product website on one design system, then produced the demo, landing page and Product Hunt gallery to the launch schedule.
- Built the design system — published publicly on Figma Community — plus a front-end delivery pipeline, shipping production pull requests in Next.js / React / TypeScript.
- Reworked onboarding, removing a forced blocking step and trimming the sign-up survey; completion of the register-to-first-create path rose by roughly 30%.
- Designed the Busabase mobile inbox, structuring agent change requests, review state and merge outcome so they stay readable and actionable on a phone.
- Ran overseas launch work: the Busabase brand page and logo kit, a bilingual launch video, Product Hunt assets and CJK, English and Japanese SEO.

HEYTEA — Shenzhen Meixixi Catering Co., Ltd.

Jul 2018 – Aug 2019

Interaction Designer

- Led four product lines: the HEYTEA GO app and mini-program (including the overseas version), in-store assistant tablets, the smart-store ecosystem, and the BOH operations platform.
- Designed the in-store assistant on store tablets — pickup, redemption and store operations — for staff working at peak hours.
- Managed a team of three designers — OKRs, task allocation and project control — behind one spec that held across phone and tablet.
- Built the design system and component library, and owned interaction and visual QA before each release.

Kingdee Yunzhijia — enterprise collaboration & IM

Nov 2014 – Jul 2018

UI & Interaction Designer

- Led four major mobile releases (V6–V9) across both phone and iPad layouts, each covering interaction rebuild, visual refresh and design system evolution.
- Designed the early Xiaoyun voice assistant inside the IM product, covering auto-reply and information lookup flows.
- Visited enterprise customers to observe real usage; built the mobile spec and control library for phone and tablet.

Tom Group — Lingxun Interactive Technology

Aug 2012 – Nov 2014

UI Designer

- Designed music and e-book apps — splash and product pages, plus the book-catalog admin — covering feature maps, interaction prototypes and visual specifications.

SKILLS

Platforms	iOS / Android apps · iPad and tablet layouts · mini-programs · in-store terminals · responsive web
Product	data and productivity tools · developer tools · agent workspaces · billing and quota · i18n and SEO
Craft	Design systems (tokens, components, CSS variables) · high-fidelity prototypes · responsive UI · accessibility
Delivery	Next.js · React · TypeScript · Tailwind · GitHub pull requests · Figma · Remotion · GSAP

EDUCATION

Business College, South-Central Minzu University

Bachelor, Art & Design (Animation) · Sep 2008 – Jun 2012

LANGUAGES

Chinese (native) · English (intermediate)
